

CHS Introduces Enhanced Cenex® Premium Diesel Fuels to Meet Needs of Fleet and Agriculture Industries

Cenex Roadmaster XL and Ruby Fieldmaster Premium Diesel Fuels improve efficiency and increase engine performance while minimizing downtime

ST. PAUL, Minn., April 28, 2010 – CHS Inc. (Nasdaq: CHSCP), a leading energy, grains and foods company, today announced the launch of its enhanced Cenex® brand Premium Diesel Fuels for the fleet and agriculture markets. Cenex Roadmaster XL® and Ruby Fieldmaster® Premium Diesel Fuels were developed to meet the demands of existing engines as well as new engine technologies designed for more stringent EPA emissions standards. The premium diesel fuels deliver increased efficiency while optimizing engine performance and reducing downtime, as highlighted in this video.

“Cenex Roadmaster XL and Ruby Fieldmaster are the next generation of the Cenex brand products, said Chad Pistulka, CHS product manager. “Created with our knowledge and experience in fuel, refining, additives and engines, Cenex Premium Diesel Fuels are formulated specifically for the demands of both existing and new engine technologies. The premium diesel fuels have not only been proven to deliver increased efficiencies, but they also extend the life of fuel injectors and protect fuel pumps from wear.”

“Cenex Roadmaster XL is an excellent product,” said Dave Millar, fleet owner of Edgerton, Wis. “We’ve seen an 8 to 10 percent increase in fuel economy. It’s very hard to do anything in your operation where you see that kind of return.”

After significant evaluation of diesel engines used in fleet and agriculture environments, experts found a number of complications related to the typical #2 diesel fuel. New engines operate under higher temperatures and pressures that can literally “cook” the fuel and damage engine parts. Cenex Roadmaster XL and Ruby Fieldmaster fuels address these complications with a complete, high-quality additive package. The result is increased engine efficiencies with minimal downtime. With specialized detergents, injection stabilizers, demulsifiers and corrosion inhibitors, the premium diesel fuels deliver numerous benefits compared to the standard #2 diesel fuel including:

- Improved fuel efficiency by as much as 5 percent
- Improved lubricity by 10 - 15 percent
- Increased engine power by as much as 4.5 percent
- Quicker, more reliable engine starts and improved cold-weather starts
- Extended lifecycle of costly injectors and fuel pumps
- Reduction of downtime and repair costs

Cenex Roadmaster XL and Ruby Fieldmaster fuels are proven to extend the life of engines by preventing corrosion and buildup and for improved fuel efficiency, and increased power for pulling heavy loads.

“As engines continue to become more complex, CHS is committed to meeting the demands of new technology,” added Pistulka. “CHS has provided safe, dependable, high-quality Cenex brand products for nearly 80 years, and we will continue that legacy with new products that ensure our customers’ success and improve their bottom line.”

Cenex Premium Diesel Fuels are available today. For additional information, please visit www.cenex.com.
